**RE: Southeast Rockford Ground Water NPL Site
Ground Water Monitoring Results - Sampling Event #20**

Dear Gentlemen:

The analytical results for the ground water monitoring samples collected at the Southeast Rockford Groundwater Contamination Site (the Site) during the semi-annual monitoring event conducted in November 2008 are enclosed. This sampling event constitutes the 14th semi-annual sampling event and 20th sampling event overall for the long-term ground water monitoring element of the remedy established under the approved RD/RA Work Plan.

Sample collection and analyses were completed in accordance with the recently amended Site Field Sampling Plan and RD/RA Quality Assurance Project Plan (QAPP). Sample preparation and analyses were performed by TriMatrix of Grand Rapids, Michigan consistent with USEPA SW-846 procedures. The analytical results were validated by NES. The validated laboratory data sheets and data quality summaries are provided in Appendix A.

The ground water monitoring network is shown in Figure 1. The analytical results for the chemicals of concern (COC) identified in Section VI of the Site Record of Decision (ROD) are summarized in Table 1. Please note that, although vinyl chloride (VC) is not identified in the list of COC in the ROD for the Site, concentrations reported above the MCL of 2 µg/l are listed in Table 1 at the request of USEPA in correspondence dated December 14, 2006.

The historical analytical results for samples collected from the Site ground water monitoring network by monitoring well location are presented in Table 2. Table 2 also includes the sum of the total VOC concentrations for the Site COC. The total VOC concentrations reveal general trends at each monitoring location. In brief, the historical data for total VOCs indicates the following:

- Total VOC concentrations have generally decreased across the Site since inception of the long-term monitoring program in March 1999, with the exception of certain monitoring locations located immediately down gradient of identified source areas as presented below.
 - ✓ Total VOCs in ground water monitoring locations near source Area 7 were lower than the prior sampling event in May 2008 with the exception of MW-101C and MW-133B.
 - ✓ Total VOCs in ground water monitoring locations near source Areas 4, 9/10, and 11 were lower than the prior sampling event in May 2008 with the exception of MW-113B, MW-130, MW-201, MW-202, and MW-203.

- The ratios of parent VOC compound concentrations with associated breakdown product concentrations appear to indicate that natural attenuation is occurring at the Site.
- Total VOC concentrations at monitoring locations proximate to the Rock River are generally constant or decreasing with the exception of MW-206B.

Data Validation Summary Comments:

1. **QC batch 0814377:** acetone (3.39J µg/l) and bromomethane (0.270J µg/l) were detected in the analytical batch 8120910; acetone (3.05J µg/l), bromomethane (0.300J µg/l), and methylene chloride (0.240J µg/l) were detected in the analytical batch 8120913.

QC batch 0814378: acetone (2.91J µg/l) and bromomethane (0.330J µg/l) were detected in the analytical batch 8120912; acetone (3.05J µg/l), bromomethane (0.300J µg/l), and methylene chloride (0.240J µg/l) were detected in the analytical batch 8120913

According to the 10X rule for acetone and methylene chloride and the 5X rule for bromomethane, detections of these compounds have been qualified as not detected as follows:

| | Trichloroethene | 7.7 | 7.1 |
| | Tetrachloroethene | 10U | 10U |

As shown, the investigative and duplicate sample results are in good agreement with each other. Therefore, the samples collected during this quarter are deemed representative of Site conditions at the time of sample collection.

Methylene chloride was reported in the trip blank (Trip Blank TM1779) at 1.11 µg/l. Therefore, according to the 10X rule, all positive results report less than 11.1 µg/l have been qualified as not detected as follows:

| Well | Compound | Original Result | Validated Result |
|------------------|--------------------|-----------------|------------------|
| MW133B | Methylene Chloride | 3.20J | 10U |
| MW201 | Methylene Chloride | 4.40J | 10U |
| FD2 (MW201 dupe) | Methylene Chloride | 3.10J | 10U |

Note: positive results that were previously qualified as not detected because of detections in a QC blank are not included in this table.

OVERALL ASSESSMENT OF DATA

Based on the review of the quality control criteria, the method appeared to be in control. Therefore, the data are acceptable for use as qualified.

Data for the above samples are:

- Acceptable for use
- Acceptable for use as qualified
- Unacceptable for use

Is action required by the Project Manager?

Yes No

Data Validation Summary Comments:

1. A trip blank did not accompany the samples to and from the laboratory and therefore was not analyzed as part of this SDG.

OVERALL ASSESSMENT OF DATA

Based on the review of the quality control criteria, the method appeared to be in control. Therefore, the data are acceptable for use as qualified.
